

### ABSTRACT

The present invention relates to a wrapping container for individually wrapping an interlabial pad that is easy to be unwrapped and a wrapping body comprising this wrapping container to provide an interlabial pad individual wrapping container including an interlabial pad within a wrapping container that makes it possible to smoothly take out the interlabial pad included therein from the wrapping container.

The unwrapping operation is made simple by maintaining a region (7) where the wearer holds a wrapping container (3) for unwrapping the wrapping container (3). Moreover, an individual wrapping body (1) is provided to allow the wrapping container (3) and the interlabial pad to be simultaneously held so that the interlabial pad included therein is also indirectly held when holding the wrapping body (1), thereby allowing sanitary unwrapping operation.
